

Leverage Your Existing 3E Data in New Ways

Elite 3E comes with a rich reporting asset few firms take full advantage of. The 3E “BillSum” table is a built-in data warehouse of key billing cycle values aggregated by matter, timekeeper and period. Unlike expensive third party business intelligence (BI) products that are static and updated nightly at best, BillSum is refreshed nearly “real-time” and not limited to pre-loaded data. To take advantage of BillSum for analytics and reporting requires query and data visualization creation capabilities.

How it Works

Relevant BillSum fields are mapped to a glossary maintained in DP3E’s virtual data warehouse and then transformed on demand into meaningful time aggregates, series and filters with DP’s intuitive web workflow. DP only stores rules about how to process data, not your data, saving significant IT time and enabling users to quickly create new analytic content.

Users produce advanced data visualizations in short order by selecting a chart template from the library, linking in elements from the virtual warehouse and configuring the chart’s dynamic settings. DP generates the chart’s presentation and optimized query code with a web service URL to identify it. Invoking the URLs, which are usually embedded in web pages, causes the code to be retrieved and executed on the BillSum table.

What is Decision Pace for 3E (DP3E)?

Decision Pace (DP) is a data analytics development platform facilitating rapid creation of sophisticated interactive charts directly from existing data sources. DP3E directly integrates BillSum with DP’s intuitive web interface for transforming the detailed data into best practice KPIs and charts. It auto-generates the query and presentation code that otherwise is custom developed. DP3E delivers immediate results upon installation with 100 prebuilt data visualizations embedded in dashboards for both management and attorneys. It can then be utilized to create new analytic deliverables reaching new user audiences available from any device. 3 simple steps:

- Install** – leverage your existing 3E server to install DP3E’s software and prebuilt content in about an hour.
- Review** – look at your data visualized in new intuitive ways by navigating through DP3E’s collection of advanced dashboards.
- Enhance** – most firms will retain a significant amount of the pre-built content so they can focus on minor enhancements to make it their own. Updates are produced in days, not months with typical BI.

Best Practices Built In

Analytic Content – the following best practice permutations of views, dimensions and KPIs are visualized through evolved, graphical and exception-based charts, reports and drill-ins.

Views	Dimensions	KPIs
Firm	Rolling Periods (R12, R3)	Billing Cycle Stats
Practice	Time Series (mnts, weeks, days)	Rate, Bill, Collect Realizations
Office	YTD, MTD, QTD, Prior Year	Utilizations
Partner	Baseline to Trend	Margins
Timekeeper	Budget to Actual	Aging and Days Out
Client	Point in Time	Leverage
Matter	Rate of Change	Profit

“Open” Charting Framework – leading open source chart libraries (D3, Google and DataTables) and customizable HTML5 templates are integrated for maximum flexibility.

Security – network security is inherited by DP making it seamless to lock down visualizations by role or individual.

Performance – DP generated optimized chart queries can be executed real-time or on a scheduled basis that caches results.

Hybrid Cloud Architecture – DP is provisioned in the cloud while your 3E data never leaves your secure network.
